

Carry-Propagation und Bit-Layout des Layered-Ring-Hash-Verfahrens

Carry-Propagation Beispiel
 $n = 8, j = 3, \text{col} = [1, 0, 1, 1, 0, 1, 0, 0]^T$
Rohwert $\sigma = 813$

Bit-Layout des Layered-Ring-Hash
($W = 16$ Bit pro Ebene, 1 aktive Ebenen)
