

Riemann-Integral: Diskrete Approximation des kontinuierlichen Integrals

$$\int_0^{2\pi} [\sin^2(x) + 0.3\cos(3x) + 0.7] dx$$

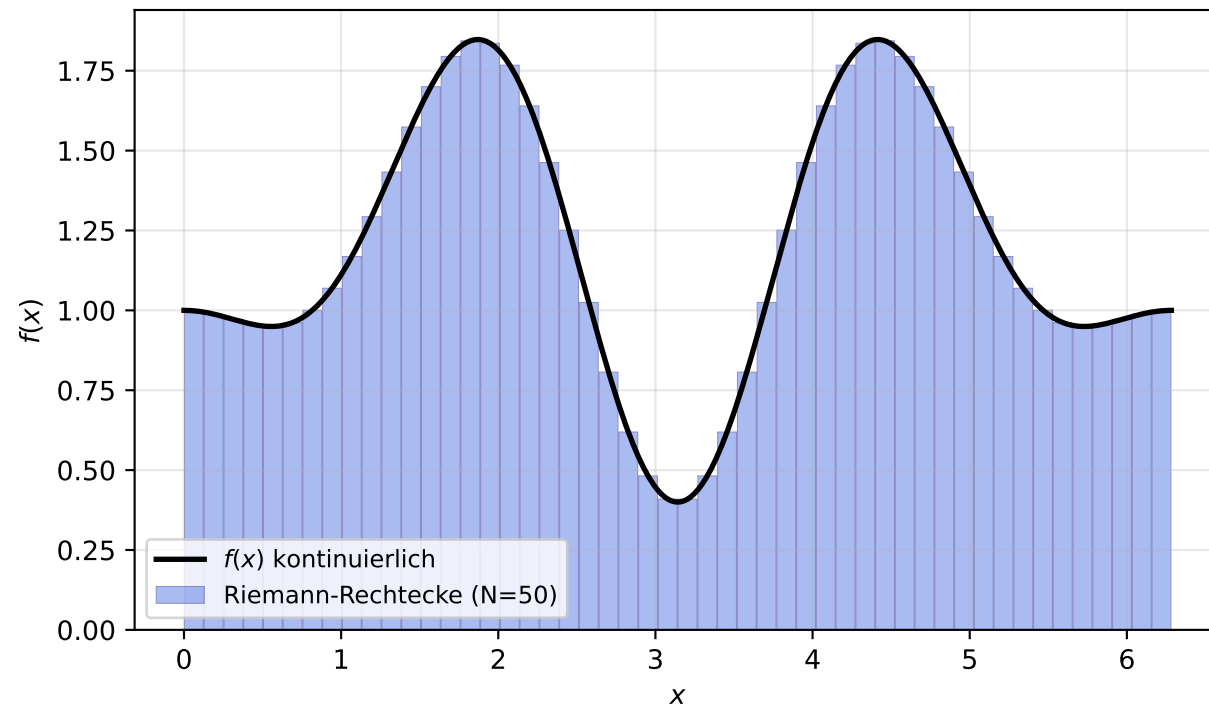

N = 4 | $I \approx 7.5398$ | Fehler = 0.000%

N = 10 | $I \approx 7.5398$ | Fehler = 0.000%

N = 50 | $I \approx 7.5398$ | Fehler = 0.000%

N = 200 | $I \approx 7.5398$ | Fehler = 0.000%
