

Abbildung 4: Simulation -- Greedy (Shehory-Kraus) vs. exakter Subset-DP ($n = m = 10$, $r = 5$, $k = 3$, 80 Instanzen)

(A) Greedy vs. DP
(80 Instanzen, $n = m = 10$, $k = 3$)

(B) Verteilung der Verbesserung durch exakten DP

(C) Verteilung des Gesamterfolgs (80 Instanzen)
